

## THE BIMAX BIOMETRIC CONTROL UNIT

The biometric fingerprint control unit takes safe security up another notch. It protects management from negligence, misuse or liability claims.

### What makes the BiMax unique?

- No Universal Tool - each unit is factory encrypted for the specific property so it won't work elsewhere
- Instant Damage Control - In case of loss, theft, or staff turnover, user passwords and the hotel master card can be reprogrammed instantly.
- Ultimate Security - override operation requires a personal password, fingerprint identification, and the hotel smart key master.
- Personal Responsibility - Each BiMax operation is recorded by user I.D., date/time, and room number.

### What does the Audit System include?

- Two Reports - the safe audit report and BiMax unit self-audit report
- The report shows the last 120 safe operations and 160 override unit operations.
- Room number, type of operation, personal I.D., date and time of each operation.
- Audit report can be printed or filed on a P.C.
- The report is immune to power failure and cannot be erased
